Independent Multi-Disciplinary Analysis of the Global Energy Sector

Howard Schipper B.A. M.A. Cantab.

The Multi-Disciplinary Research Role of Alacritas Research

In the race to realize a clean energy world economy by 2050 there will emerge significant innovation and technological change, in what could be called the Industrial Revolution of the 21st century

Going forward, Alacritas Research will follow these innovations and technological developments with the insights and alliances of renowned Energy Scientists from the leading global Research Universities.

The principal of Alacritas Research will have had a direct working relationship with each, as they provide expert opinions reflecting their areas of expertise.

Alacritas Research will serve as a multi-disciplinary research facility for our clients.

We will engage primarily in the following roles:

- Identify and validate the Science claims of companies in the public and private markets.
- Identify false Science claims of companies who attempt to raise Capital based on the “Snake Oil Factor”.
- Our role will enhance any existing due diligence already undertaken by our clients, providing them with independent validation of those claims from sources of unquestioned scientific Authority.
- The Energy sector as an object of study is best suited to a multi-disciplinary approach.
- This approach touches upon every aspect of life, from the Natural Sciences of Physics, Chemistry and Biology to the Social and Political Sciences, Economics, Law, Behavioral Science and Cultural Anthropology.

Incorporating all these disciplines, allows for an in-depth understanding of both Global Energy Science and Policy.
